Initial Disposition:

The EPA sent 3 officials to the Club stemming from a complaint (Above) submitted by XXX , former club president. The call came from YYY from the EPA wanting to come and inspect the range. Present Club executive committee met them at the range. According to the Officials there are two things that we are responsible for. One is that we mine the lead as we see necessary and that we prevent drainage of rain water from leaving our property. It must perk through the ground. In both areas it appears that we've met their criteria.

Club President submitted to them a certificate from Southern Lead Removal, the company that club used to mine the lead. Secondly after walking all areas of the property we have no drainage pipes leading to other properties. However, outside of our berms there is a ditch that runs along the property and they took samples to see that we are not leaking any materials. They did not expect any problems and were very impressed with our range safety and operations.

Any questions about this visit or other matters concerning the Club, please feel free to call Board Members.
